- . HTML
- . CSS
- . Javascript
- . Python
- . MYSQL
- .TeamWork
- . Problem Solving

Projects

Wheather APP

"Create a weather app using HTML, CSS, and JavaScript to provide users with real-time weather updates. The app will feature a clean and intuitive user interface, allowing users to input their location and view current weather conditions, temperature, humidity, and wind speed. Utilizing APIs like OpenWeatherMap, the app will fetch and display accurate weather data, ensuring a seamless and informative experience for users."

AgeCalculator

"Build an intuitive age calculator using HTML, CSS, and JavaScript to determine a person's age based on their birthdate. The calculator will allow users to input their birthdate and display their current age in years, months, and days. With a clean interface and accurate calculations, users can effortlessly track their age with ease."
